

ECOFROG

Ecofrog project

Our objective

To lead a process of **innovation and global development of the O₃ zone solutions** and contribute to achieve more cost-efficient, eco-friendly, and healthy habits.

O₃ Technology

Ozone (O₃) is a substance whose molecule is composed of **three oxygen atoms, formed when the two atoms that make up oxygen gas dissociate**. Each released oxygen atom binds to another gaseous oxygen molecule (O₂), forming ozone molecules (O₃).

Through **O₃zone**, the exclusive EcoFrog cleaning systems not only take care of the environment and protect their users, but, as a central objective, they clean, degrease and disinfect. **This is endorsed by the certifications and accreditations of our systems.**

FDA approved

As an antimicrobial agent for food, contact disinfectant for food, and recognized as a Good Manufacturing Process for sanitizing bottled water.

USDA Organic Approved

The USDA National Organic Program as an antimicrobial agent and food sanitizer.

USDA approved

In agriculture as a microbial agent for food and a contact disinfectant on food surfaces.

EPA approved

As a highly effective antimicrobial, disinfectant and sanitizer.

CHANGE

ECOFROG's MIND IS A GREEN FUTURE

REDUCE | REUSE | RECYCLE

Investment

- > Eliminate fixed costs in chemicals.
- > Profitability of personnel and machinery.
- > Reduction in water expenses.

Saving

- > Suppression of up to 80% and 90% of chemical products.
- > Suppression of times of purchase, management and storage of chemical products.

Ecofriendly

- > Elimination of chemical products to clean, disinfect and degrease.
- > Elimination of single-use plastic containers and polluting discharges.

Healthy

- > Environments free of toxic agents.
- > Reduction of exposure to chemicals from the skin, eyes, throat and lungs through the air.
- > Reduction of occupational risks.

Total disinfection

- > Viricidal, fungicidal and bactericidal action.
- > Disinfectant and antiseptic action.
- > Tranquility and security.
- > Accreditations of UNE regulations.

Use it for everything

- > Degreasing and deodorant action.
- > Use it on any material or surface that was previously washed with chemicals.
- > Ability to work with hot water.

Professional use

Clean, disinfect, deodorize and degrease any surface with just one product. Multiple applications for professional use.

Industrial use

Cleaning and disinfection system for installations where large water flows and longer operating times are required.

Domestic use

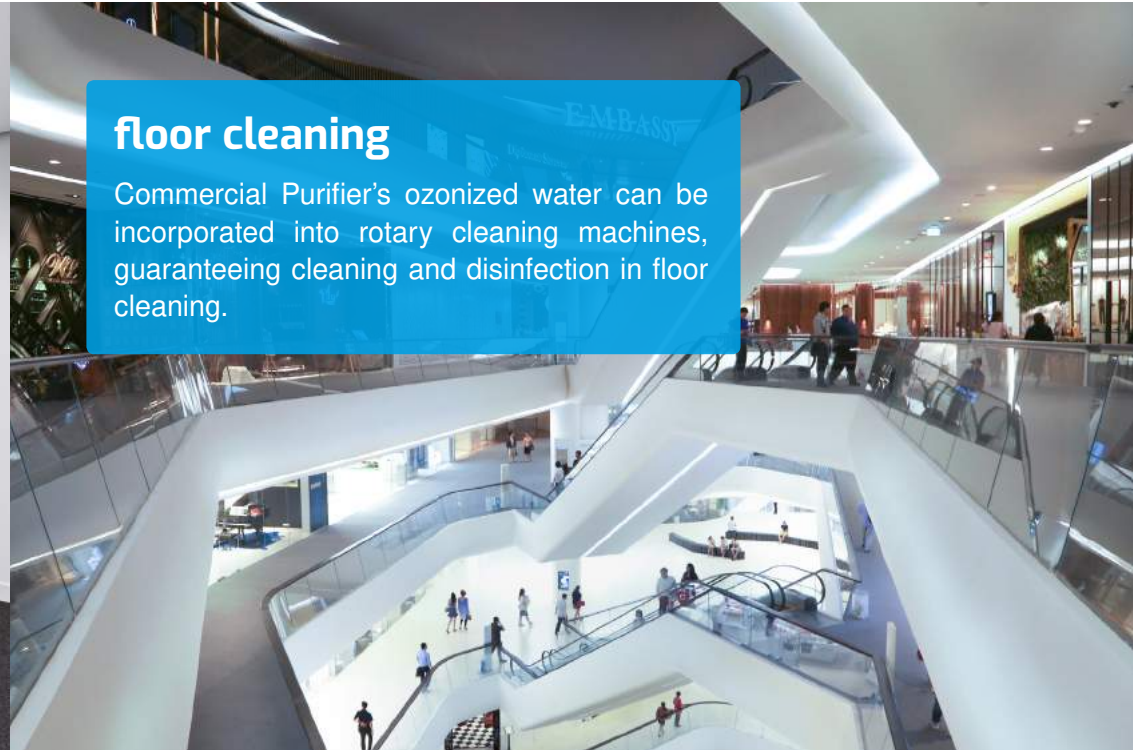

Cleaning and disinfection of surfaces and laundry with domestic washing machines without the need to use any chemical product.

Professional use

Specialized in the HORECA channel, our ozone water systems are an Ecofriendly solution for the hotel industry that generates added value to businesses and eliminates between 80% and 90% of the use of chemical products, simplifying

the management of product orders for cleaning as well as its storage, reducing the risks and labor losses due to these and saving costs. [Restaurants, cafes/bars, butchers, kitchens, catering, hotels, albergues, hostels, rural houses...](#)

floor cleaning

Commercial Purifier's ozonized water can be incorporated into rotary cleaning machines, guaranteeing cleaning and disinfection in floor cleaning.

Industrial use

Cleaning and disinfection of any type of surface for high-volume work environments, in all types of sectors and needs, protecting the health of employees and customers by not using chemical products for cleaning and disinfection.

Offices, department stores, supermarkets, hotels, nursing homes, residences, hospitals, day centers, sports clubs, self-service laundries, schools and colleges.

Domestic use

Ecofrog systems make it possible to dispense with approximately 99% of cleaning chemicals for both surface cleaning and laundry at home. This means a significant reduction in the shopping basket and at the same time taking

care of the environment. Cleaning and disinfection of all types of surfaces: floors, walls, glass, furniture of any material and in any room, along with sinks, tiles, joints and partitions...

AVATAR
BY ECOFROG

Reduce chemicals in your business

Avatar is Ecofrog's most advanced and efficient water ozone generation system. Clean, disinfect, deodorize and degrease any surface. Multiple applications for professional use.

WASH
BY ECOFROG

Eliminate detergent in your commercial dishwasher

With the WASH by Ecofrog plugin you can use Avatar not only to clean and disinfect surfaces in your business but you can also connect it to industrial dishwasher systems by removing detergent.

For industrial use with heavy workloads

Commercial Purifier, the ozone in water cleaning and disinfection system for installations where large water flows and longer continuous operating time are required.

Bet on ozone in your home

Elektra by Ecofrog, intended mainly for domestic use, allows the cleaning and disinfection of surfaces and laundry with domestic washing machines without the need to use chemical products.
