

Our Purpose

The Active O3 project was born in response to a growing demand from our society in recent years: the creation of cleaning systems that are environmentally friendly and, at the same time, healthy for their users. We are redefining the future of cleaning with ozone-generated water: a powerful, chemical-free solution that delivers superior sanitation while protecting the environment.

Our **purpose** is to enable businesses and households to transition away from harmful chemical cleaning practices toward safe, sustainable, and cost-effective solutions.

These solutions protect human health and reduce environmental impact, while embedding sustainability and measurable impact at the core of our innovation, operations, and growth strategy.

Our cutting-edge ozone technology transforms ordinary water into a highly effective natural disinfectant. It eliminates the need for harmful chemicals, reduces waste, and conserves natural resources. Ozone water is ideal for a wide range of applications, including commercial and industrial cleaning, food safety and sanitation, residential cleaning, and water and waste reduction.

We are dedicated to promoting environmental responsibility and innovation in the cleaning industry. By supporting the transition to ozone-generated water, businesses and individuals can reduce their carbon footprint, protect natural resources, and contribute to a healthier planet, more sustainable future for people and the planet.

The Board of Directors hereby approves the following Purpose Statement for Active O3.
